

Form Oil

STARFIRE Concrete Form Oil is compounded to prevent bonding between steel or wood forms and concrete surfaces. Special additives allow for use on Teflon coated forms, as well as, mold surfaces generally used in concrete pre-cast operations. Form oil improves the stripping of forms and extends form life by protecting wood surfaces and preventing rust on metal forms.

STARFIRE Concrete Form Oil can be applied by a variety of methods, including spraying, brushing, mopping, dipping or rolling. It is non-staining to most types of aggregates.

Typical Properties

API Gravity	26.8
Viscosity, Kinematic	
cSt @ 40°C	23.1
cSt @ 100°C	4.1
Viscosity Index	56
Flash Point, °F	350
Pour Point, °F	-22
